

Robots Work. People Rule.

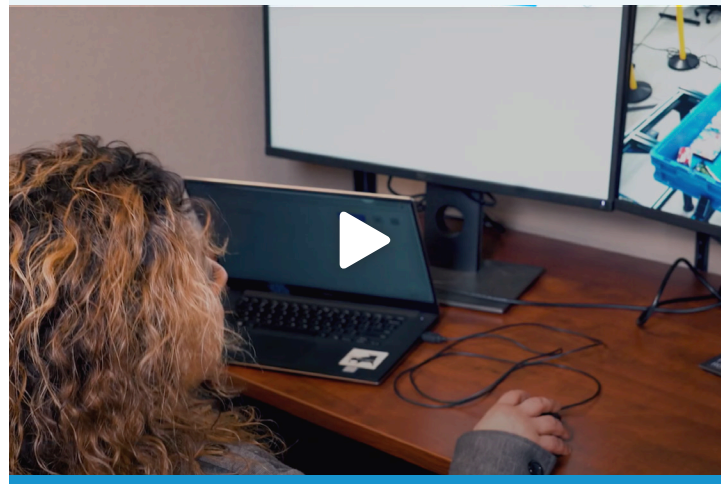

Plus One Robotics is Pushing the Boundaries of HRI

Imperfect autonomy complemented by human intelligence

Plus One Robotics leverages computer vision, machine learning, and human-robot interaction to solve some of the toughest problems in industry today. We blend human and robot skills to increase efficiency and speed, and continually improve, in various environments.

With a human (Crew Chief) in the loop, Plus One Robots can call for immediate help and continue working efficiently, even when faced with new or uncertain tasks—a constant in the e-commerce environment.
